

New transposition table of PCT codes

FBR has issued the new transposition table of the PCT codes of the Pakistan Custom Tariff (PCT). These codes (HS-2022) have been issued for accurate classification/assessment of imported commodities in line with the World Customs Organization (WCO) standards. Pakistan will adopt HS 2022 version w.e.f 1st July,2022.

The main objectives of the HS Convention are the facilitation of international trade and collection, comparison, classification, and coding of goods in international trade. It helps to reduce the expenses related to international trade. It also facilitates the standardization of trade documentation and transmission of the data.

A comparison of the Harmonized system HS-2017 and HS-2022 has been specified by FBR for the accurate classification of imported goods. In the new transposition table, the FBR has specified the existing PCT codes, any new PCT headings, and changes in the description under HS-2022. (Template attached)
The complete transposition table is available on the FBR's website under the URL
